Component Diagram - User Accounts & Roles

«container»
Web Application
[React]

Runs in the browser. Shows only the sections each role can use: My Documents, Review Queue, All Documents, and Submit Document, plus the search bar, the review screen with the AI feedback, the profile, and in-system notifications. For the Super Admin: Audit Trail, User Accounts, Holiday Calendar, and AI Settings.

Sends user account requests
[HTTPS / JSON]

Backend Application [Laravel / PHP (Apache application server)]
[container]

«component»
Access Middleware
[Laravel Middleware]

Checks the active session and ends it after 60 minutes of no activity or when the account is disabled. Allows only the sections, actions, and documents permitted by the role, ownership, or reviewer assignment.

Passes allowed requests (Super Admin only)

«component»
User Account Controller
[Laravel Controller]

Handles Add/Edit User Account, Assign User Role, and Disable/Reactivate User Account. Lists and filters the accounts, validates the details and the disable reason, and lists the replacement reviewers at the same level, without the account holder and the submitters of the waiting documents. Keeps only one active Division Chief (L3) when one is added, given the role, or reactivated. Blocks changes to the Super Admin's own account, disabling or changing the role of the current Division Chief (L3), reused email addresses, and making an account L3 while its own documents are still in review.

Notifies the account holder, replacement reviewer, previous Division Chief (L3), and submitters (not on Add/Edit)

Records account changes and moved or returned documents

Moves waiting documents to the replacement reviewer or the new Division Chief (L3), or returns them

«component»
Notification Service
[Laravel Service / Queued Job]

Saves the in-system notification and sends the matching email in the background through Gmail, recording any delivery failure. Sends only the email to an account that was disabled.

«component»
Audit Logging Service
[Laravel Service]

Writes read-only audit records with a server-generated timestamp, including the old and new values when something is changed.

«component»
Workflow & Routing Service
[Laravel Service]

Generates reference numbers, saves documents and revisions, assigns reviewers, and changes the status following the L1, L2, L3 review order. Also cancels submissions, and moves waiting documents to a replacement reviewer or the new Division Chief (L3), returning them only if no one can take them.

Checks the account's role and status
[SQL]

Stops and starts TAT

«component»
TAT Service
[Laravel Service]

Starts and stops each reviewer's TAT and counts it in working days (Monday to Friday), not counting the holidays in the Holiday Calendar or the time waiting for the submitter to revise.

Reads and saves accounts, roles, and status
[SQL]

Sends emails through Gmail
[SMTP]

Saves in-system notifications
[SQL]

Writes audit records
[SQL]

Writes assignments, status, and system-generated records
[SQL]

Saves TAT dates; reads holidays
[SQL]

«external_system»
Google Workspace

Handles Sign in with Google, checks the sharing of Google Workspace document links, and delivers email notifications through Gmail.

«container»
DocuFlow Database
[MySQL (database server)]

Stores user accounts and roles with the encrypted Google Drive permission, documents and their revisions, Google Workspace links, file details and locations, document hashes, review records and remarks, AI feedback, AI knowledge and settings, the holiday calendar, in-system notifications, the audit trail, and the background job queue.
