Component Diagram - AI Knowledge & AI Settings

«container»
Web Application
[React]

Runs in the browser. Shows only the sections each role can use: My Documents, Review Queue, All Documents, and Submit Document, plus the search bar, the review screen with the AI feedback, the profile, and in-system notifications. For the Super Admin: Audit Trail, User Accounts, Holiday Calendar, and AI Settings.

Sends AI knowledge and AI settings requests
[HTTPS / JSON]

Backend Application [Laravel / PHP (Apache application server)]
[container]

«component»
Access Middleware
[Laravel Middleware]

Checks the active session and ends it after 60 minutes of no activity or when the account is disabled. Allows only the sections, actions, and documents permitted by the role, ownership, or reviewer assignment.

Passes allowed requests (Super Admin only)

Passes allowed requests (Super Admin only)

«component»
AI Knowledge Controller
[Laravel Controller]

Handles Review AI Knowledge. Shows the Pending AI Knowledge and the Knowledge Base by document type and review level, without reference numbers or document links. Approves entries (after an optional edit) or rejects them, saves flagged suggestions as Do not suggest entries, and edits, disables, or enables approved entries.

«component»
AI Settings Controller
[Laravel Controller]

Handles Update AI Configuration. Turns the AI Assistant on or off, saves the document types that get AI feedback (at least one while it is on, never Other), and shows how reviewers responded to the AI suggestions.

Records approvals, rejections, edits, and status changes

Records setting changes with the old and new settings

«component»
Audit Logging Service
[Laravel Service]

Writes read-only audit records with a server-generated timestamp, including the old and new values when something is changed.

Checks the account's role and status
[SQL]

Reads and updates AI knowledge entries
[SQL]

Reads and saves AI settings; reads response counts
[SQL]

Checks the connection when the AI Assistant is turned on
[HTTPS / REST API]

Writes audit records
[SQL]

«container»
DocuFlow Database
[MySQL (database server)]

Stores user accounts and roles with the encrypted Google Drive permission, documents and their revisions, Google Workspace links, file details and locations, document hashes, review records and remarks, AI feedback, AI knowledge and settings, the holiday calendar, in-system notifications, the audit trail, and the background job queue.

«external_system»
AI Assistant

AI model accessed through an API that gives preliminary feedback and suggestions for each review level.
